

Environmental, energy, and occupational safety policy

Sustainability secures the future of our company. We reconcile economic, ecological, ergonomic and social requirements and face up to our social responsibility.

The environmental and occupational safety policy of our company is based on responsibility towards people and the environment. Our contribution to environmental and occupational health and safety as well as technical safety is aimed at avoiding hazards and minimizing risks.

Environmental and occupational health and safety and technical safety are the responsibility of every single employee in the company. Compliance with legal and regulatory requirements is an absolute priority.

1. We take all necessary measures to prevent accidents, injuries and occupational health damage, to minimize the environmental impact and to save energy.
2. The environmental and energy impacts are assessed and taken into account at the earliest possible stage of product and process planning. This includes, among other things, the purchase of environmentally friendly and energy-efficient products and services. We already counter the possibilities of illness and injury preventively in order to eliminate them in advance through targeted actions.
3. Compliance with the binding obligations forms the basis of all our environmental, energy and occupational safety activities.
4. We define goals and monitor their achievement to ensure continuous improvement of the EH&S system. We provide the necessary resources for this.
5. Environmental and occupational safety-conscious action is one of the tasks of every employee. One of the tasks of managers is to create conditions for ensuring that the safety of people and the protection of the environment are observed in all activities.
6. We influence our business partner to proceed according to guidelines equivalent to ours. We work cooperatively with the responsible authorities.
7. We make our experience and knowledge, as well as our relevant environmental, energy and occupational health and safety aspects, available to the interested public within the framework of operational requirements.
