3 Packaging, pallets and goods containers

3.1 Defined packaging

Please find more details at "Packaging Information".
[ASMPT SMT Solutions - PDF Viewer](#)

3.2 Packaging that has not been specially stipulated

Combinations of materials (e.g. steel staples, nails in lumber) must be kept to a minimum and must be easy to separate after use.

Addition for deliveries to the EU:

Since 03/03/2013, Regulation (EU) No 995/2010 of 20/10/2010 (EU timber trade regulation) has placed an obligation on market operators to provide proof that timber and timber products introduced into the single market for the first time have been legally harvested. Dealers must be able to identify suppliers and recipients of timber and timber products throughout the supply chain. This information must be retained for at least five years and made available on request.

3.3 Pallets and goods containers

As a rule, the only pallets and goods containers permitted are euro pallets and euro wire mesh boxes. If containers are used as goods containers for large deliveries, packaging materials in accordance with IPPC standards must be used to prevent pest infestation and mold. Fumigation of containers is not permitted, fumigated containers will not be accepted!

4 Securing of packaging

Adhesive tape and welded polyester strapping must also be used to secure the packaging. For reasons of safety, steel straps are only to be used in exceptional cases!

5 Segregated packaging

The different types of goods must be packaged separately in appropriately marked bags and boxes or in separate goods containers. The sizes of the packaging units are to be defined in consultation with the purchasing department (see 3 Packaging, pallets and goods containers) in accordance with internal ASMPT criteria (e.g. KANBAN and kitting quantities).

6 Delivery quantity and completeness

Delivered quantities are supposed to match the ordered quantity. In case of deviations, the delivery papers need to be adjusted accordingly.

7 Delivery note information

The following information must be shown on delivery notes. Information **shown in bold** requires a **barcode**:

- **Delivery note number**
- **Order number**
- **ASM item number**
- Item name (correct technical name)
- Delivery quantity
- Supplier number
- Supplier's ID/item number
- Unambiguous packaging unit number
- Item number as per ASM order number
- UN numbers
- Contact person

8 Handling of dangerous goods

In addition to the general handling regulations, the following special stipulations apply to dangerous goods:

- Provision of material safety data sheets to the responsible contact person in the purchasing department prior to initial delivery
- Documentation of the correct UN number with the correct item description (technical name) as well as hazard label number and packaging group on the delivery note, if applicable.
Example: UN 1719 CAUSTIC ALKALINE LIQUID N.O.S.
(sodium metasilicate), 8, III
- Should be shipped as a limited quantity where possible.
- Packaged and labeled in compliance with dangerous goods regulations
- Packaging for dangerous goods/hazardous materials labeled in compliance with the applicable statutory requirements (Overpack, Ltd Qty, etc.).

ASMPT reserves the right to charge for disposal costs which have arisen as a result of poor or inadequate packaging of the dangerous goods.

9 Transport control

Our regulations and requirements in respect of deliveries of goods procured on *EXW - ex works* or *FCA - free carrier* shipping terms, i.e. where ASMPT SMT is liable for the transport costs, are listed in the following document: "Routing Order plant supply for ASMPT SMT".
